

EZ Conveyor Loader™

MAIL TRAY STORAGE SOLUTION

Organization and efficiency for any automated mail processing equipment with an output conveyor.

- **Standard four tray or custom widths available.**
- **Requires no additional floor space.**
- **Durable stainless steel construction.**
- **Allows trays to be sleeved in place.**
- **Ergonomic design reduces repetitive stress.**

EZ Conveyor Loaders are designed to hold US Postal Service mail trays over the output belt of automated mail processing equipment or conveyor systems.

Set at the proper angle to hold the trays for easy access and at the proper height for effortless mail handling, the EZ Conveyor Loader improves efficiency and throughput. No longer is the operator required

to turn away from the operating machine to place swept mail into a mail tray. Their attention stays focused on the machine, resulting in fewer stops, and better throughput.

The EZ Conveyor Loader's four tray capacity stages approximately 2800 pieces of mail. Height can be varied to insure accurate positioning with your particular conveyor system. Let us know if you have an unusual height requirement and we'll be glad to accommodate you.

The EZ Conveyor Loader-8, holds 8 trays in two tiers. Ideal for use with conveyor systems adjacent to automated mail sorting equipment, the EZ Conveyor Loader Two stages 4800 pieces of mail in 6 square feet. Custom heights and widths are available upon request.

Constructed out of brushed stainless steel, the Conveyor Loader family outperforms painted products, offering a durable surface that will not chip, stain, or rust. It's lightweight yet durable construction saves on freight costs and makes the unit easy to move for cleaning or maintenance.
